Surcharge Policy Notes & Citations:

1. Base Price / Lb. is an approximation of a commodity's price on metal exchanges in the Policy's base year, 2003. This is the price ACS factors into product costing and quotations.
2. Current Price / Lb. is the material's trailing two-month's (i.e. November calculations use September's closing spot averages) on metal exchanges. The Base Price / Lb. is subtracted from this number to calculate the surcharge component applied to individual alloys.
3. ACS factors 6% total scrap on raw material - 3% for wire processing and 3% for finished goods fabrication.
4. Energy surcharges are applied on a trailing two-months' basis. Surcharges are calculated based on actual utility costs.
5. Total Surcharge / Lb. equals the Surcharge Sub Total plus the Scrap Factor plus the Energy Surcharge. This value is applied to individual part weights
6. For the trailing two months' London Metal Exchange averages used for Nickel, Chromium, Iron and Moly, please visit:
